

# Woodlands in the Anthropocene: A Conference

11 June 2018 from 9-16

Aarhus University, Eduard Bierman

Søauditorierne, Building 1252, Room 204

Please join us for a one-day conference exploring the histories, presents, and futures of woodlands.

This event explores how scholars might better understand woodland change by bringing together research on large-scale global forest shifts with detailed case-based histories about woodlands.

In doing so, it fosters an interdisciplinary conversation among noted scholars from the social and natural sciences, including **Matteo Garbelotto** (forest pathology), **Janet Franklin** (landscape-scale forest dynamics), **Osamu Saito** (rural production landscapes), **Andrew Mathews** (forest histories), **Annik Schnitzer** (plant diversity), **Pep Serra-Diaz** (forest system modeling), **Jens Christian Svenning** (geospatial forest ecology), and **Anna Tsing** (environmental anthropology).

The event is free and open to all, but please register at: [anthropocene.au.dk/woodlands](http://anthropocene.au.dk/woodlands)

The conference is organized by the **AURA group**: **Jens-Christian Svenning** (AU Bioscience), **Anna Tsing** (AU Anthropology), **Heather Swanson** (AU Anthropology) and **Alark Saxena** (AU Anthro+Bioscience)
