

AARHUS
UNIVERSITY
RESEARCH ON THE
ANTHROPOCENE

30 OCTOBER 2014
Auditorium 1, Bldg 1441
Tåsingevej 3
8000 Aarhus

This series of lectures showcases the groundbreaking research made possible by crossing boundaries between the arts/humanities and the natural sciences.

"We are all lichens," writes Scott Gilbert, referring to the interspecies symbioses that make possible multicellular life on earth. Moving beyond the Genes-R-Us "modern synthesis," Gilbert opens a revolutionary new biology informed by what philosopher and science studies scholar Donna Haraway calls "becoming with." By staying with our "multispecies muddles," as Haraway reminds us, we might yet build livable worlds.

10.00-10.15

ANNA TSING, Welcome

10.15-11.10

SCOTT GILBERT

Holobiont by Birth: Childbirth as the Maintenance of Community

11.10-11.15

Comments by Donna Haraway

11.15-12.00

Discussion

12.00-13.30

Lunch (Stakladen for the invited guests)

13.30-13.45

ANNA TSING, Introduction to Donna Haraway

13.45-14.40

DONNA HARAWAY

Anthropocene, Capitalocene, Chthulucene: Making String Figures with Biologies and Arts

14.40-14.45

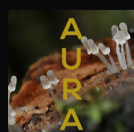

Comments by Scott Gilbert

14.45-15.30

Discussion

15.30-17.00

Reception
